

Get to know your worms crossword

The head will be nearer to the saddle. They have a protective flap covering the mouth.

Worms don't have eyes; they have light sensitive organs. They live underground so don't need to see!

Saddle

A worm's body is divided into segments. If you look carefully you will see lots of grooves around the body showing the segments.

If you listen really carefully you can hear worms move. They use small bristles on their skin to help them grip.

Across:

- 4 Worms bodies are split into hundreds of these.
- 5 Worms have light sensitive organs instead of what?
- 6 Name the raised bump in the middle of a worm's body.

Down:

- 1 What do worms have on their skin to help them move?
- 2 What does the protective flag on the head of a worm cover?
- 3 What do worms produce which is very high in nutrients?
